A;Note: the nucleotide sequence for this amino acid sequence is inconsistent with th
he codon ACC for residue 661 as Pro, the codon GAACCACCTCCTCA for residues 664-668
C;Comment: This protein belongs to the family of non-receptor kinase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          R;Reddy, U.R.; Pleasure, D.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score

CC -!- FUNCTION: PRODUCED BY ACTIVATED MACROPHAGES, IL-1 STIMULATES

CC HATURATION & PROLIFERATION, & FIBROBLAST GROWTH FACTOR ACTIVITY.

CC IL-1 PROTEINS ARE INVOLVED IN THE INFLAMMATORY RESPONSE, BEING

CC IDENTIFIED AS ENDOGROUS PROGENS, AND ARE REPORTED TO STIMULATE

CC THE RELEASE OF PROSTAGLANDIN AND COLLAGENASE FROM SYNOVIAL CELLS.

CC GEN SIMILARITY).

CC -!- SUGUNIT: MONOMER (BY SIMILARITY).

CC -!- DOMAIN: THE SIMILARITY AMONG THE IL-1 PRECURSORS SUGGESTS THAT THE

AMINO ENDS OF THESE PROTEINS SERVE SOME AS YET UNDEFINED FUNCTION.

CC -!- MIGGELLANEOUS: THE LACK OF A SPECIFIC HYDROPHOBIC SERMENT IN THE

CC PRECURSOR SEQUENCE SUGGESTS THAT IL-1 IS RELEASED BY DAMAGED CELLS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          by positive Darwinian selection.";
Biol. Bull. 182:97-104(1992).

FUNCTION: DISSOLVES THE EGG VITELLINE LAYER NONENZYMATICALLY
FUNCTION: DISSOLVES THE EGG VITELLINE OF ABOUT 3 MU-M IN
DIRING FERTILIZATION. IT CREATES A HOLE OF ABOUT 3 MU-M IN
DIAMETER THROUGH WHICH THE SPERM PASS.

-1- SUBURIT: HOMODIMER.
-1- TISSUE SPECIFICITY: SPERM.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Haliotis kamtschatkana (Pinto

1. CATALYTIC ACTIVITY: D-MYO-INOSITOL 1,4-BISPHOSPHATE + HD-MYO-INOSITOL 4-PHOSPHATE + ORTHOPHOSPHATE.

1. ENZYME REGULATION: INHIBITED BY LI(+).

1. PATHMAY: PHOSPHATIOYL INOSITOL SIGNALING PATHWAY.

1. SUBUNIT: MONOMER.

1. SUBUNIT: MONOMER.

1. AUTHOROUS: ACTS ON INOSITOL 1,4-BISPHOSPHATE AND INISCELLANEOUS: ACTS ON INOSITOL 3,6-BISPHOSPHATE).

1. ATRIPHOSPHATE (FORMING INOSITOL 3,6-BISPHOSPHATE).

1. SIMILARITY: BELONGS TO THE INOSITOL MONOPHOSPHATASE FAM.
